SCHOOL CENSUS ENGLAND MAPPINGS 2019-2020

School Census files are imported via the v4 One generic import routine. Once the import is successful, the XML tag values are stored into PLASC temporary tables, after which a project is created and validated with the One database values.

The following table describes the PLASC table columns for each tag of the School Census 2019 – 2020 file. A number of new tables have been added; these are highlighted in **green**.
